

Marine Ecosystems

First, label each marine ecosystem in the blank boxes. Then, by using the key and the attached animal worksheet, cut out each animal and glue them near the habitat they belong in (example: the pelican scanning the shallow water, looking for a fish to snack on!). Some animals may belong to more than one habitat so, take your best guess!

Marine Ecosystems:

- Mangroves
- Coral Reef
- Seagrass

Animals to label:

- Iguana
- Reef Shark
- Nurse Shark
- Sea Star
- Lobster
- Juvenile (baby) fish
- Sea turtle
- Manatee
- Dolphin
- Yellowtail snapper (adult)
- Moray Eel
- Brain Coral
- Southern Stingray
- Key Deer
- Barracuda
