

In the word bank below, there are 8 different species of sharks, all with very distinctive jaws! These shark jaws are different because of their habitat, diet, and surroundings. Match each shark species to the jaw pictures. Then, by looking at each jaw shape, describe what you think each shark eats.

<p>Species: Basking Shark What do they eat? Krill, plankton, and fish eggs</p> 	<p>Species: Great White Shark What do they eat? Large fish, other sharks, sea otters</p> 	<p>Species: Whale Shark What do they eat? Krill, plankton, and fish eggs</p> 	<p>Species: Lemon Shark What do they eat? Small fish and Crustaceans</p> 
<p>Species: Goblin shark What do they eat? Squid, Crustaceans, and deep sea fish</p> 	<p>Species: Mako Shark What do they eat? Medium to large sized fish (Mackerel, tuna, swordfish, jacks)</p>  <p><small>© 2003 Canadian Shark Research Lab</small></p>	<p>Species: Cookie Cutter Shark What do they eat? Squid and small fish</p> 	<p>Species: Nurse Shark What do they eat? Marine animals on the bottom of the ocean floor (Shrimp and crab)</p>
